Date: 25<sup>th</sup> July 2008

Dear Valued Customers & Suppliers,

## **New Management Team – July 2008**

We wish to advise the details of our new 2008 management team.

Craig Harrison	Managing Director
Janelle Thornton	Financial Director
Fritz Woller	Engineering Manager
George Trypas	Manufacturing Manager
Marc Schneider	Business Development Manager

During the past year we have been reviewing our business operations and focus. New business opportunities have been identified and new strategies have been developed to deliver services to our customers.

Our plan is to continue to develop and expand our existing business in the metals, mining, manufacturing and infrastructure sectors. Our engineering, manufacturing, sales and service activities remain as core business activities. Our objective is to deliver even higher levels of technical expertise, support and project delivery.

This review is already delivering growth and expanded business opportunities. Our staff resources have also seen growth to support the expanded activities. Our operations in all three local offices continue with our loyal staff to serve and support you. In the coming months you will be advised of some exciting new product, engineering and service offerings from ISS.

In addition we are developing new business in the renewable energy market. Our focus is on the power conversion equipment and engineering associated with connecting renewable energy sources to a load or distribution grid.

Some customers are aware of a new company, Globetech Pty Ltd, established by some former ISS employees. This company has no relationship with ISS and there is certainly no “relocation” as implied in recent communications for Globetech Pty Ltd.

We are looking forward to our continuing and growing relationship.

Yours truly,

Craig Harrison  
Managing Director
